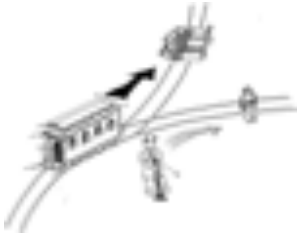
Please sit with your final group members



Global Engineering Ethics

Dolphins as "non-human persons"

- Indian Ministry of Environment and Forest: "[U]nusually high **intelligence** as compared with other animals means that dolphins should be seen as '**nonhuman persons**' and as such should have their own specific **rights**, and it is morally **unacceptable** to keep them captive for **entertainment** purposes" ("India Bans," 2013).
- Second largest **brain-to-body** ratio, and pass **self-awareness** tests

Class objectives

1. Explain the nature of **rights**, both **negative** and **positive**

2. Understand the **justification** for and **nature** of **employees** rights

3. Outline the **nature** of and **justification** for the rights of **engineers**

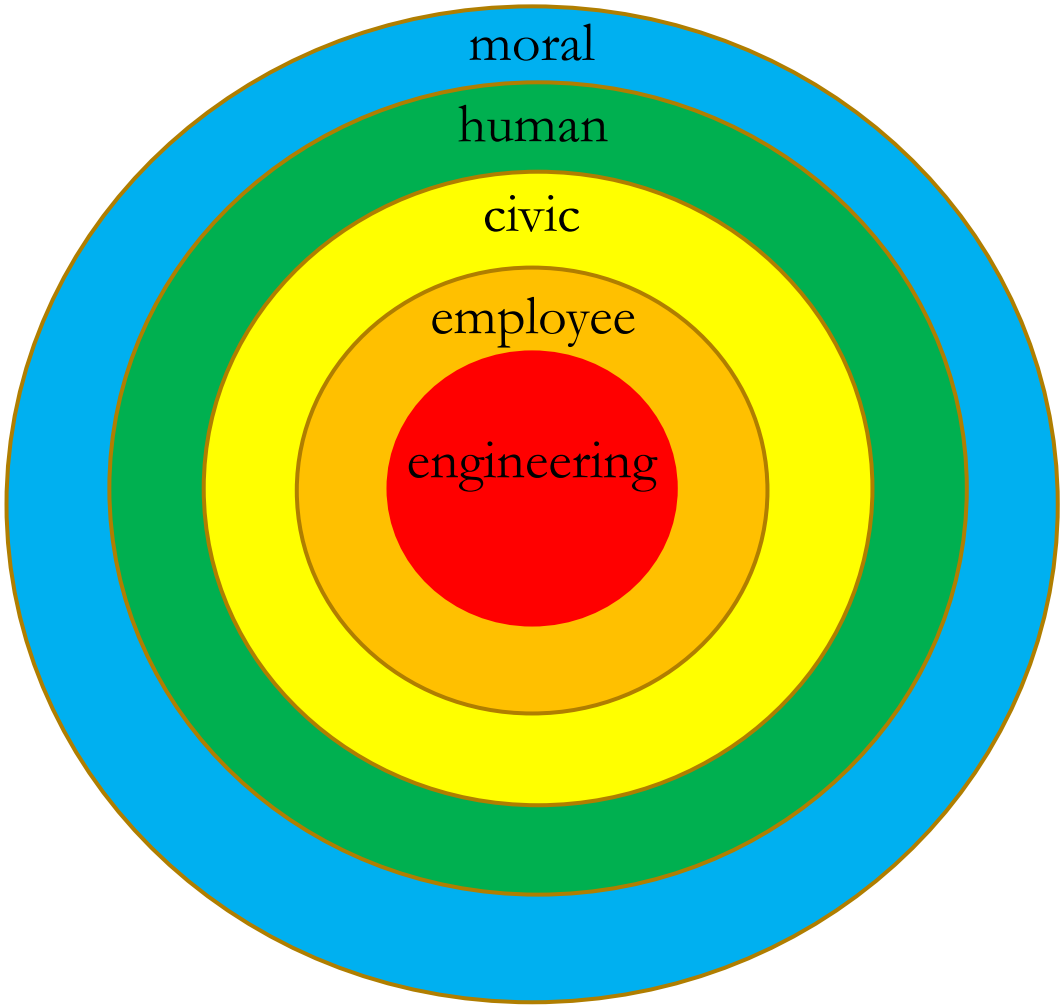
Pair-share

1. Give an example of a right that you have because of your citizenship, that someone who was not a citizen of your country would not have.

2. Which rights would you share with dolphins in India?

Rights = "protections"

- based on membership in communities
- co-relative with duties
- "negative" versus "positive"
- rights to privacy and non-discrimination



Duties of organizations, companies, and to the public → rights of employees and engineers

All employees have the right to

1. be protected from unnecessary **harm** in their employment
2. **fair** and just treatment by employers
3. not be subjected to **discrimination** or **harassment** in their employment
4. be treated by their employers based on **merit**
5. have their **contracts** honored
6. disobey **illegitimate** employment directives

As a special category, engineers have the right to

7. **blow** the whistle (externally or internally) if, in their **professional** judgments, the physical **safety** of the **public** will be endangered as a result of their failures to act
8. the resources necessary to perform their assigned task **competently**
9. **inform** the public of engineering decisions that have the potential to seriously **harm** the physical welfare of the public
10. **fair** compensation for their work, including the right to share equitably in gains resulting from their contributions to **intellectual property**

Summary

1. Rights are **protections** – **co-relative** with **duties**; **negative**: some-one or -thing having a duty **not** to do something; **positive**: some-one or -thing having a duty to **do** something.
2. Organizations and companies have **duties** → employees have corresponding **rights** – **financially**, racial and sexual **discrimination** are a waste – centering on **care-harm** and **fairness-cheating**.
3. To ensure the fulfillment of professional duties to the public, engineers should have special rights, focusing on **loyalty-betrayal**, **care-harm,** and **fairness-cheating**.

Final exam – Friday, December 6, 2-3:40 pm

- First part – five of the items from the study guide will appear, which should be answered in two to four sentences, graded out of 100
- To prepare, write out answers to questions, looking back in the reading, PPT's, and notes for materials about which you don't have the answers.
- Second part – ESIT (Engineering and Science Issue Test) and MFQ (Moral Foundations Questionnaire) honestly/thoroughly, like the first day, receive 100 for completing

Final exam – Friday, December 6, 2-3:40 pm

- No classes next week
- Office hours next: Tuesday, December 3 and Thursday, December 5, 2-5:50 pm
- Section one: D101 Dong Shang Yuan 东上院
- Section two: D102 Dong Shang Yuan东上院
- Arrive early, putting everything except a writing utensil and ID in your bags, at the front of the classroom
- Final reports due at the final exam – hard copies and e-versions
- Classes the week after
- Presentations – submit PDF's of PPT's

Final presentations

- **Maximum five** minutes – **two** minutes to present and **three** minutes to elicit and answer questions (timed).
- Only **one** person needs to present, but all group members should be able to answer questions.
- Tell us 1. what **happened** 2. why it **matters** – very straightforward – **do not** go through the case-study procedure
- Presentations will be graded according to the **rubric** posted online, similar to criteria used in academic writing and technical communication courses.

Final case-study assignment

- check guidelines and grading rubric
- finals due next week – hardcopy and e-version – at and before the final
- five to seven 1.5-spaced pages of text – can/should include pictures or diagrams – don't count towards total
- 12-point, Times New Roman font, APA style, with one-inch margins – no cover page
- first two to three pages outline/explain the case
- second three to four pages analyze – case-study procedure

Homework

- Complete and submit final versions of your case studies
- Study for the final exam
- Begin preparing case-study presentations
